# Our Intelligence Forces Is Available

FOIAb3b

PRESIDENT EISENHOWER HAS  
Americans a picture taken  
to indicate the po-  
United States' new in-  
equally reassuring  
his highly sensitive and secret  
fold of keeping an eye on possible  
a report by Sen NORRIS  
New Hampshire.

The Senator, venting to his con-  
ponents gave this rundown on the  
Central Intelligence Agency and some  
techniques and tools  
game of international hide-  
and-seek.

Since Sputnik, people have  
a kick. What is the matter with  
intelligence? This brought only  
a vague response from Allen Dulles  
to the effect that 'We know a bit more  
about what is going on than we are  
credited with knowing.' His reply  
to be guarded.

CIA must be highly secret. It re-  
quires a pass to buy a candy bar at  
its snack counter. Even its waste pa-  
is classified, bagged and burned  
under surveillance. The question now  
is answered. Not only have we been  
controlling the side of the Iron Cur-  
tain with every delicate instrument  
known to man, but for four years  
our U-2's have been flying Russian

sides and taking pictures. We have  
not been able to

Furthermore, it proves that our  
alleged 'intelligence lag' does not ex-  
tend to aerial photography. In that  
field we must have weapons.

"Shots of launching pads and bases  
from 70,000 feet have been blown up  
so that every detail is clear. Actual  
photos from 10,000 feet (at 1 1/2 miles)  
distinguish telephone poles and iden-  
tify articles of clothing hanging on  
washlines.

"Smithsonian's satellite tracking  
station has relayed pictures of small  
objects like 1,200 miles above the  
earth. This is equal to photographing  
a golf ball in Miami with a camera  
in Boston.

Incidentally, spy planes are prob-  
ably near the end of their usefulness.  
But two of our satellites will be do-  
ing the job. Midway, an infrared sen-  
sible infrared warning system, and  
Samos, a picture-taking reconnaissance  
satellite will see photos from 200 miles  
up with 100' like it was taken from  
100 feet distant.

"Long-range bombers do not fly  
as high as the U-2, but they are faster,  
and it is far to assume that many  
ground-based missiles could follow  
them. The Soviet Union has no  
missiles.
